TOLSEN VDELIN^E

VDE refers to Verband Deutscher Elektrotechniker in German. Technical working equipment and consumable materials subject to the applicable device and product safety laws bear the VDE-GS mark, which stands for the safety of the product with regard to electrical, mechanical, thermal, toxicological, radiological and other dangers. In addition, tools with the VDE-GS mark conform to the VDE regulations or European or internationally harmonised standards, i.e. they confirm the compliance with the safety requirements of the respective guidelines.

 1000V

DOUBLE TRIANGLE AND VOLTAGE RANGE

If insulated tools or aids are marked with the symbol of the double triangle and the assigned voltage or voltage range specification or the class, they are suitable for working on energised parts at the stated voltage.

DIN EN 60900 (IEC 60900)

An international standard which, among other things, describes the design of insulated tools in detail. For example, the thickness of the protective insulation is specified. In addition, the standard defines individual tests (piece tests) as well as series and random sample tests for checking the electrical safety of the protective insulation.

INSULATION TESTS

Every tool is tested to 10,000V

IMPACT TEST

The first test is carried out at ambient temperature of $23 \pm 5^\circ\text{C}$ and the energy of impact test can be equal to a fall from a height of 2 meters.

The second test is carried out at an ambient temperature of $-25 \pm 3^\circ\text{C}$ and the energy of impact test can be equal to a fall from a height of 0.6 meters. If with C marked, the test need to be done by $-40 \pm 3^\circ\text{C}$.

ELECTRICAL TEST

The test piece is immersed in a bath of water at room temperature of 24 ± 0.5 hours. there should be no electrical discharge, spark over or flashover during 3mins testing at a voltage of 10KV.

INDENTATION TEST

With loading a weight of 20N and a voltage of 5KV, the indenter is applied to the centre of handle. under the situation, the testing piece should pass the electrical test.

TEST FOR ADHESION OF THE INSULATING MATERIAL COATING

The test piece is heated to $70 \pm 3^\circ\text{C}$ for 168 hours, then loaded with weights. the handle should fully attached to the metal part aer 3mins testing.

FLAME RETARDANCY TEST

The flame is applied to the test piece for 10 seconds. the height of the flame on the burning handle should not exceed 120mm in 20 seconds after burner removed.
